

# PEnGUIn Encoder MP4 README

Written by  
La'fear Aug 01, 2011

PEnGUIn Encoder MP4 which is a GUI Application for mencoder is designed to encode most video file formats to MP4. Users may find that the GUI looks like the same PEnGUIn Encoder PMP except muxer mode for ipod, iphone, Apple TV and PSP. In the tutorials folder, I put some mp4 videos to help users easier to know how PEnGUIn Encoder works.

**encode\_mp4\_psp\_e.mp4** shows how to add movies in queue window for encoding.

**get\_extra\_code\_support.mp4** shows how to get extra codes from MPlyer Project for decoding RMVB (It means that users can encode RMVB → MP4).

**muxer\_none\_mode\_e.mp4** show how to export video only (without AAC).

Except above tutorial videos. Users still can visit my blog in English. <http://penguintool.blogspot.com> or website in Chinese <http://www.exomaniac.com> for asking more support.
