Q1. What's the difference between options "MP4_DIVX", "OPTIMIZE" and "NONE" in the Muxer Mode?
A1. Setting for "MP4_DIVX" will encode video in DIVX format and audio in AAC format, and mux them in MP4 container. OPTIMIZE and NONE will encode video in H264 format and audio in AAC format, and mux them in MP4 container.

Q2. How can I keep the .264, .avi and aac files which are produced during encoding?
A2. In Preferences, uncheck the option "export MP4 only".

Q3. Can I encode all the rmvb files to MP4?
A3. As I know, RV10 + AAC audio in RMVB might not be supported.

Q4. Can I encode all the wmv files to MP4?
A4. Some of the wmv files in wmv9 or VC-1 format can't be decoded.

Q5. How can I encode short duration of video clip for testing?
A5. Press command + P or select preview encode under Extra menu.

Q6. How can I donate the development?
A6. Under the Help menu, please click the Donation for PEnGUIn Development.
