Roman-Arabic-Roman

This little application will convert Roman numerals to Arabic, and visa-versa.
I created it mainly for converting dates when transcribing documents.

No installation needed. Just unzip it and run it.
The application is free for none commercial use.

How to use it.
Just type into either the Roman or Arabic box and the conversion is done automagically.

The maximum arabic value is 3999.
The maximum roman numerals is 10, but MMMCMXCIX is the highest sensible value.

Have fun
Les Hardy
